WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition in nolves the cartilage, and is preferably arthritis. The invention is also used in gene therapy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a kidney injury associated molecule (KIM) CC protein. KIM proteins can be administered therapeutically by expressing CC KIM encoding polynucleotides, to promote growth and/or survival of CC damaged tissue (e.g. renal tissue), since the KIM proteins are CC upregulated in injured or regenerating (especially renal) tissues. KIM CC dission proteins, conjugates, antibodies and vectors can also be used CC therapeutically, e.g. these or the KIM proteins may be included with an acceptable carrier in pharmaceutical compositions, useful for therapy/CC prophylaxis of conditions associated with disfunction/disregulation of CC KIM genes or proteins, especially renal diseases or impairments of renal function in humans (e.g. acute renal failure, acute nephritis). The CC polynucleotides can be used to produce antisense sequences which, when internalled into cells, can disrupt expression of a cellular KIM gene, CC calso useful in therapy (e.g. to block the growth of tumours dependent on CC KIM for growth) or compositions. The proteins and polynucleotides are compositions. The proteins and polynucleotides are (indicative of increased risk, or presence of, renal injury or impaired CC (increased risk, or presence of, an autoimmune response or abnormal tissue growth arising from/affecting renal tissue). The proteins can also be CC used to locate KIM-producing cells (especially specific loci, e.g. tissue masses abnormally producing/expressing KIM such as tumours arising tissue in a dispression reader and imagina readers accountails with an imageable KIM-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Kidney injury-associated molecule, KIM, injured or regenerating tissues, useful regeneration, especially to treat renal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC This invention relates to nucleic acid sequences AAF93744 - AAF93916
CC which encode human secretory or membrane protesins represented by AAB8317
CC - AAB8419. Included in the invention are primers AAF93917 - AAF62232 - AAF62235 which are used to isolate the cDNA sequences of the CC AAF62232 - AAF62235 which are used to isolate the cDNA sequences of the cinvention. The invention also includes methods for the production of the cantibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polymucleotide sequences can be used in gene cused in the prevention, treatment and diagnosts of diseases associated cused in the prevention, treatment and diagnosis of diseases associated concleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The colypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and activity. The antibodies may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as therapeutic agents to down regulate expression and contribute and in antibodies may also be used as therapeutic agents to down regulate expression and contributed inmunosorbant assay (EJISA). Examples of diseases which may be contributed in antibodies and arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 285

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel human secretory proteins or membrane proteins, and their coding sequences. The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences and proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information supplied by the European Patent Office.

```

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be disgnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  foetal abnormality; developmental abnormality; haematopoletic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; binding partner identification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), seppis, diabetes, atherosclerosis, CC cardiovascular disorders, seppis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, cognitive disorders, related disorders, endocrine disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used CC as a food additive or preservative to modify storage properties. CC Antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked indumnosorbent assay (ELISA). The present sequence represents a human CC carrieted protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 215

                                                                                                                                                                                                                                                Alignment
                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired limmunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens

New albumin fusion proteins, useful for diagnosing, treating, or ameliorating diseases or disorders e.g. cancer, anemia, ariasthma, inflammatory bowel disease or Alzheimer's disease. , treating, preventing anemia, arthritis,

Disclosure; SEQ ID NO 2096; 279pp; English

CC cardiant, notropic, antilpaemic, nephrotropic, uropathic, convergence antilpaemic, nephrotropic, uropathic, convergence antilpaemic, nephrotropic, uropathic, enabolic, convergence and vulnerary. The albumin fusion protein nucleic acid may convergence and vulnerary. The albumin fusion protein nucleic acid may convergence and vulnerary. The albumin fusion protein is convergence and protein is convergence and protein in the store and protein is convergence and protein indication: Y. The diseases or disorders include: cancer (e.g. leukaemia, colon, bone, breast, liver or lung cancer), convergence convergence (e.g. nanemia, multiple myeloma, arthritis, asthma, AIDS, convergence and the store and Down's syndrome, Patau syndrome, Turner's syndrome, Apert syndrome or Tay Sachs disease), excretory diseases (e.g. urinary incontinence, urinary tract infections or renal disorders), neural or sensory disease (e.g. Alzheimer's disease, Parkinson's disease, cerebral malaria, meningitis, cerebellar ataxia, attention deficit disorder, autism or obsessive compulsive disorder), respiratory disease (e.g. emphysema, lung cancer or occupational lung disease), endocrine diseases (e.g. diabetes, Addison's disease or glomerulonephritis), digestive diseases (e.g. portal hypertension, irritable bowel disease, gastric atrophy or pancreatitis) or connective tissue or epithelial diseases (e.g. Crohn's disease, scleroderma, wound healing or epidermolysis bullosa). This sequence represents a therapeutic protein X relating to the albumin fusion protein of the invention. The sequence listing data for this specification was dowloaded from the USPTO website. disorder in a patient comprising the step of administering the albumin fusion protein; a method of treating a patient with a disease or disorder that is modulated by Therapeutic protein: X, or its fragment or variant; a method of extending the shelf life of Therapeutic protein: X, or its fragment or variant; a nucleic acid molecule comprising a polynucleotide sequence encoding the albumin fusion protein; a vector comprising the nucleic acid molecule of the albumin fusion protein; and a host cell comprising the nucleic acid molecule of the albumin fusion protein. The albumin fusion protein and its compositions have the following activities: cytostatic, antiantemic, antiarthitic, antiasthmatic, antiarthitic, antiarthythmic, osteopathic, dermatological, antignout, immunomodulator, antiarrhythmic, cardiant noctronic, antilneemic, nephrotronic, uropathic, cardiant noctronic, antilneemic, perhyptoronic, uropathic, cardiant noctronic, antilneemic, perhyptoronic. further relates to: a composition comprising the albumin fusion pand a pharmaceutical carrier; a kit comprising the composition of albumin fusion protein formula; a method of treating a disease or relates to a novel albumin fusion protein.

```
CA AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB873413 represent the protein fragments. The genes can their corresponding secreted protein fragments. The genes can their corresponding secreted proteins are useful for preventing, creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating the presence of mutations in the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the cannount of the new genes. Specific uses are described for each of the immune system, cannount of the immune system, ca

cc and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene cherapy. Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the canonic of the new genes. Specific uses are described for each of the canonic of the canonic of the conditions of the conditions of the conditions of the conditions in the new genes. Specific uses are described for each of the canonic of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the canonic of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the products for the diagnosis or treatment of conditions. Allows a conditions of the disorders, diseases of the immune system, conditions, neurological disorders (e.g., reunmatoid arthritis), inflammation, conditions, disorders, diseases, conditions, disorders, stancophrenia, asthma, skin conditions, disorders, stancophrenia, asthma, skin conditions, disorders, and infections. The proteins can also be used to aid wound the aling and epithelial cell proliferation, to prevent skin aging due to conduct of primary tissues, to regenerate tissues, to identify their conditions of primary tissues, to regenerate tissues, to identify their conditions of primary tissues, to regenerate tissues, to identify their conditions of primary tissues, to regenerate tissues, to identify their conditions of primary tissues, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Cc alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radiommunoassay or enzyme linked communoassays e.g., radiommunoassay or enzyme linked conditions in the discrete of the invention conditions in the discrete of the invention con AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  당
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                    AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the protein in a sample or by determining the for each of the second on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's Parkinson's diseases and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               03-SEP-1999;

                                                                                                                                                                                                                                                                                                                                                               The invention relates to Willebrand Factor A domain related-protein (WARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The

The invention relates to Willebrand Factor A domain related protein (WARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal	Claim 7; Page 72-73; 103pp; English.	New isolated Willebrand Factor A-Related Protein polypeptide useful for the manufacture of a medicament in the treatment of a disease condition of the extracellular matrix, in particular arthritis.	; 2003-111873/10. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human VA domain
                                                                                                                                                                                                                                                                                                                                                                                      inmunne system disorder; AIDS; autoimmune disease; rheumatojoietic disorder; inflammation; allergy; neurological disorder; AIDS; attoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; AIDAeimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; binding partner identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 180
                             Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer, Parkinson's diseases and cancers.

The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, dispetive disorders (e.g. Crohn's
                                                                                                                                                                                    Albumin fusion

AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the protein in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                 Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's Parkinson's diseases and cancers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioinmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention
                                                                                                                                                                                                                                                                     foetal abnormality; developmental abnormality; haematopoietic disorder; immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; cell culture; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; binding partner identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   abnormalities, haematopoietic disorders, diseases of the immune s AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammat allergies, neurological disorders (e.g., Alzheimer's disease, Parkinsons's disease), cognitive disorders, schizophrenia, asthma disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders,

Included in the invention are primers AAF93917 - AAF94295 and CC AAF62322 - AAF6235 which are used to isolate the CDNA sequences of the CC invention. The invention also includes methods for the production of antibodies directed against the proteins, and CDNA sequences, which can CC be used in vaccines. The polynucleotide sequences can be used in gene CC used in the prevention, treatment and diagnosis of diseases associated CC with inappropriate secretory protein/membrane protein expression. The CC used in the prevention, treatment and diagnosis of diseases associated CC with inappropriate secretory protein/membrane protein expression. The CC used in the preventary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect CC and gannitate the presence of similar nucleic acid sequences in samples. CC They may also be used as antigens in the production of secretory proteins/membrane polypeptides and their role in metabolism. The CC against them and in assays to identify modulators (agonists and CC may also be used as therapeutic agents to down regulate expression and continty. The antibodies and antagonists consists the presence of the polypeptides in samples (e.g. by enzyme CC detecting the presence of the polypeptides in samples (e.g. by enzyme CC inhed impunosorbant assay (ELISA). Examples of diseases which may be consisted and include rehumantid attributed and diseases which may be consisted as antiperson of the polypeptides in samples (e.g. by enzyme CC treated includes and consisted diseases which may be

                                                                                                                                                                                                                                                                                                                                                         membrane proteins, and their coding sequences. The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences and proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The

                                                                                                                                                                                The invention relates to Willebrand Factor A domain related-protein (MARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human WARP protein

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-CC ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences: The polynucleotides are useful for central protein or complementary sequences: The polynucleotides are useful for cencoded polypeptides (ABP68902-ABF69849) are useful as molecular weight cencoded polypeptides (ABP68902-ABF69849) are useful as molecular weight cencoded polypeptides (ABP68902-ABF69849) are useful as molecular weight considers, as food supplement, for generating antibodies; in medical consignation of the printed seases (Parkinson's cor alzheimer's disease), autoimmune diseases (multiple sclerosis, cor alzheimer's diseases), autoimmune diseases (multiple sclerosis, cor alzheimer's diseases, autoimmune, autoimmun
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 10

New treating NOVX polypeptides and nucleic acid molecules useful for preventing NOVX-associated disorders, e.g. cancer, diabetes, infection or and in chromosome mapping, tissue typing or pharmacogenomics. õ

SEQ ID NO 2; 1880pp; English.

neuroprotective, nootropic, anorectic, antidabetic, antimicrobial, and antilipaemic activity, and may have a use in gene therapy, and as a vaccine. The polypeptides are encoded by NOVX polynuclectides comprising any of the 303 fully defined nucleotide sequences given in the specification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, Alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are The invention relates to a novel isolated polypeptide (NOVX). A polypeptide of the invention has cytostatic, immunomodulator, neuroprotective, nootropic, anorectic, antidiabetic, antimicrob probes, chromosome mapping, tissue
